“Expenditure distributor Management”

Author: Aakash Bisen

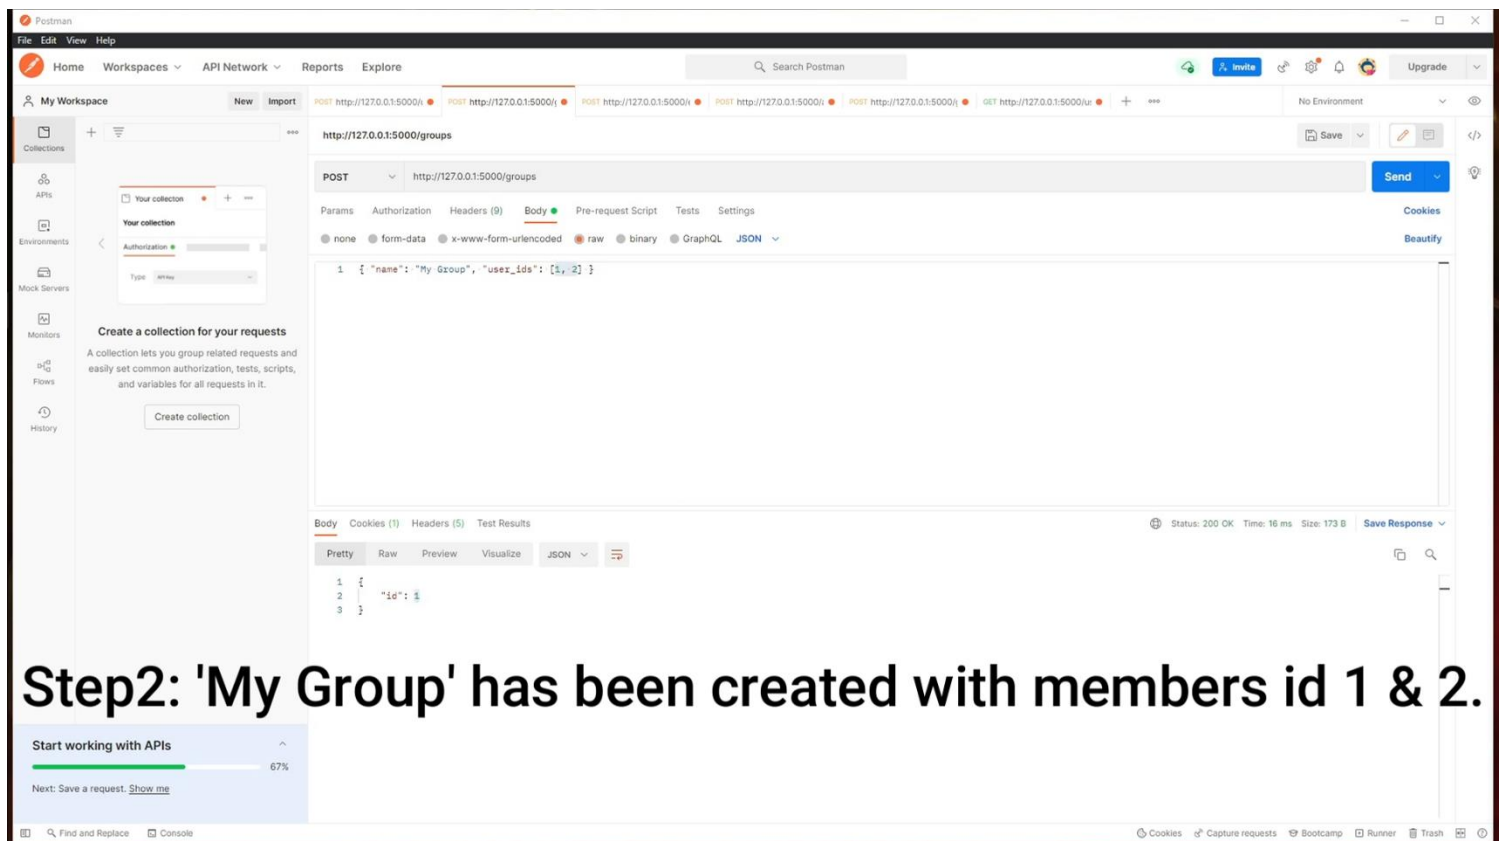

The application allows users to create a group, add their individual expenses, track their expenses, get them approved by other group members, distribute expenses fairly, make payments to each other, and view past expenses statistics.

Step1: Allow users to create a group of people(named 'user1' & 'user2' with id's 1 & 2 with mail id 'user1@example.com' & 'user2@example.com')

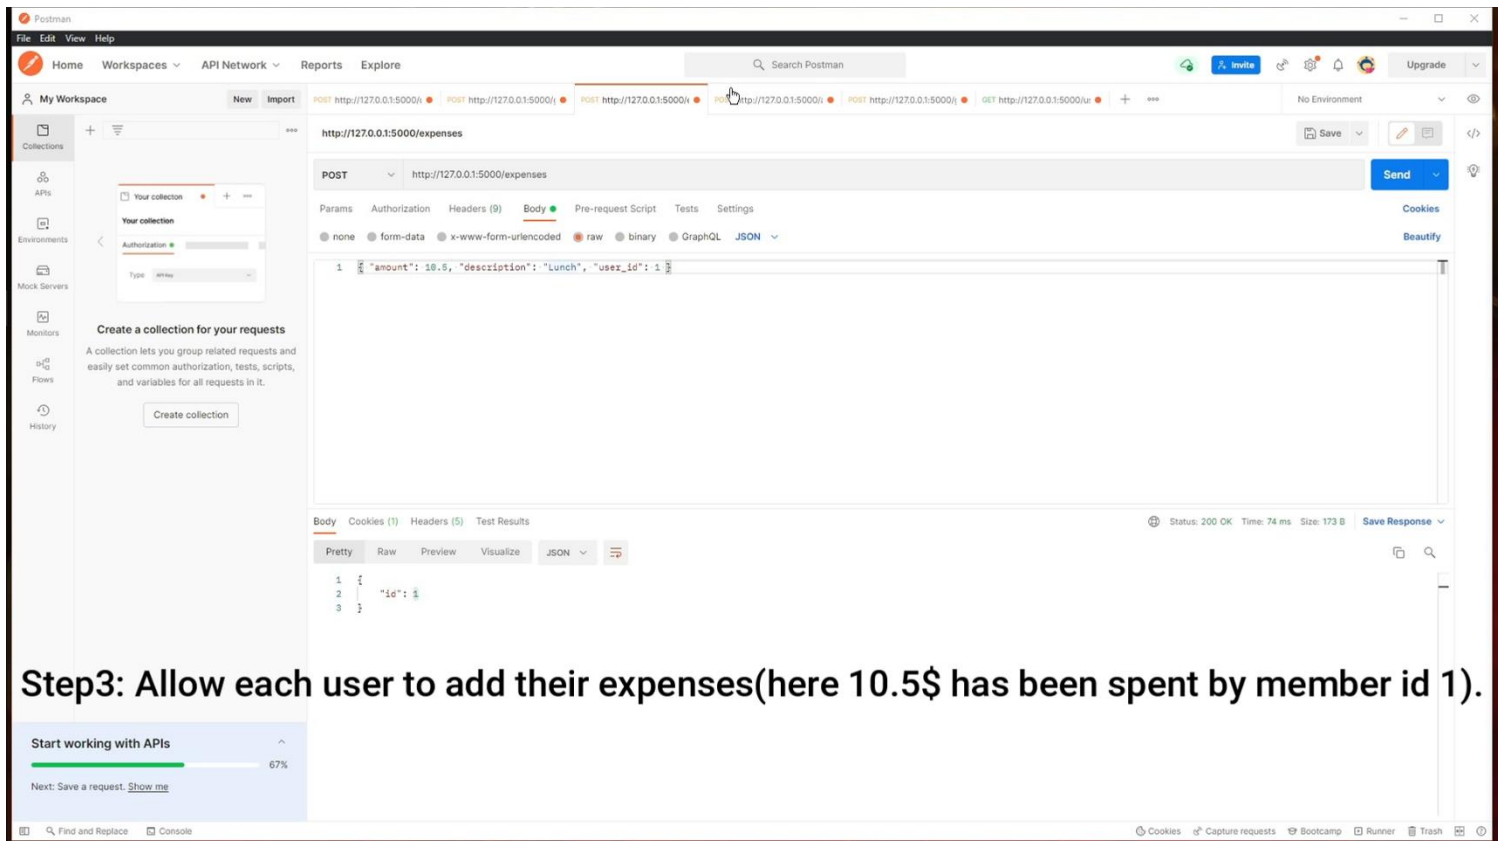

Step1: Allow users to create a group of people(here id 1 & 2)

Step2: Allow each user to add their expense(here 'My Group' has been created with member id's 1 & 2)

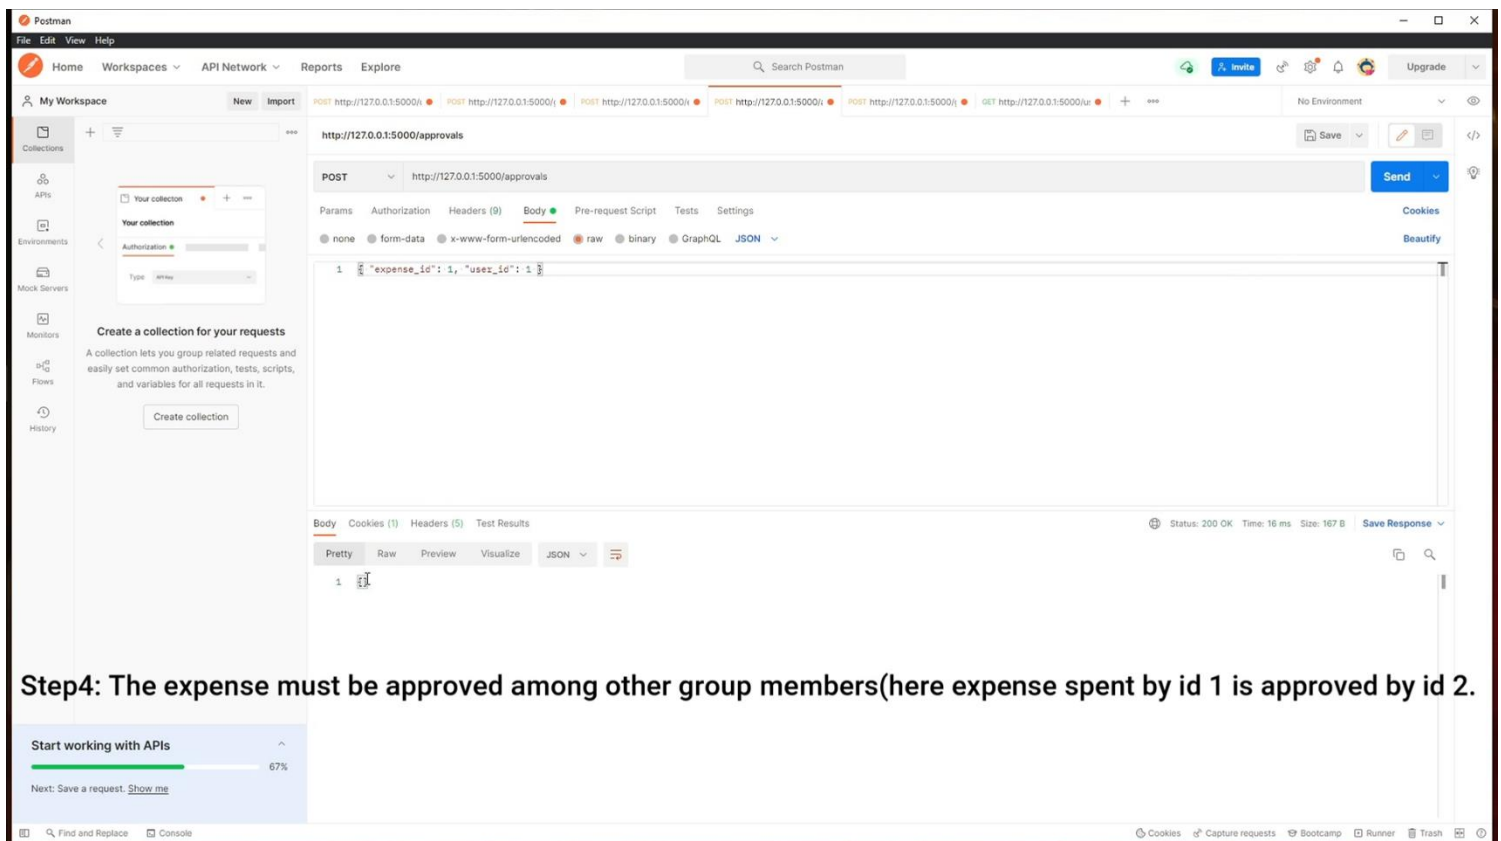

Step3: Allow each user to add their expense(here user id 1 has spent 10.5 for lunch & added this expense to the 'My Group'.

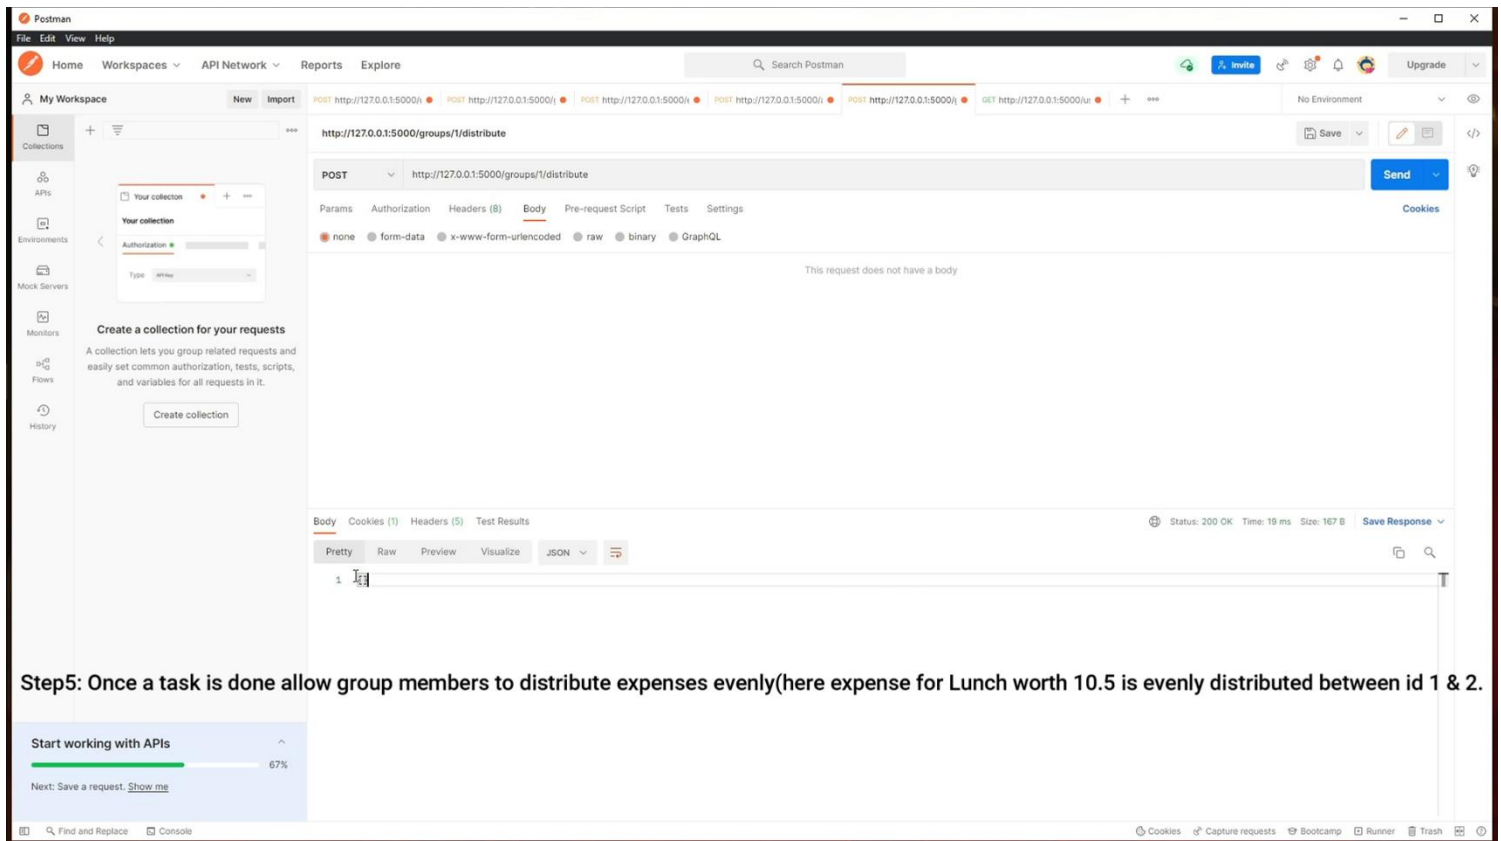

Step3: Allow each user to add their expenses(here 10.5\$ has been spent by member id 1).

Step4: The expense must be approved among other group member(here expense submitted by user id 1 is being approved by user id 2)

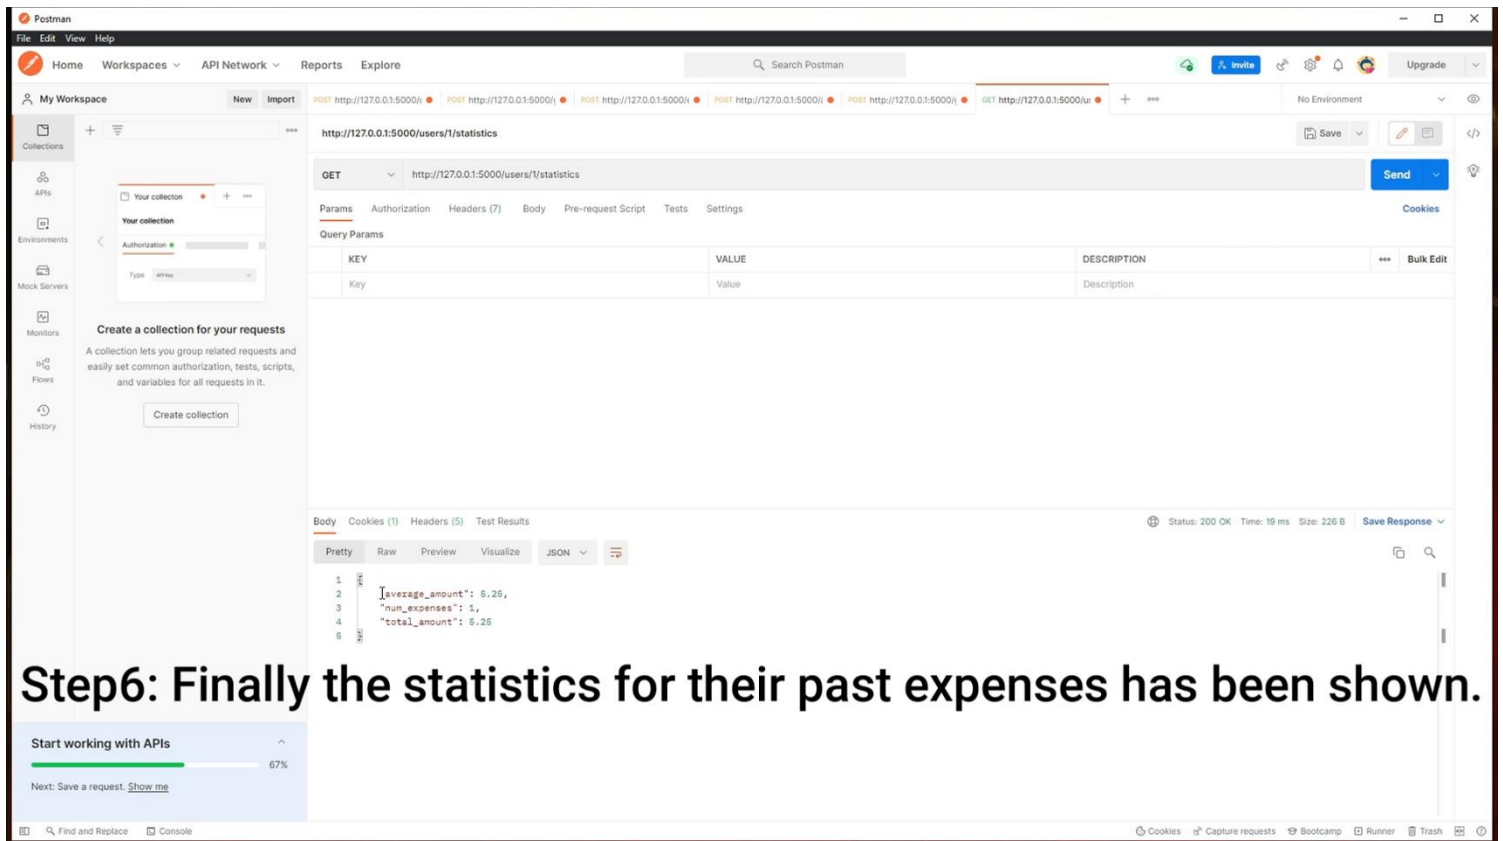

Step4: The expense must be approved among other group members(here expense spent by id 1 is approved by id 2.

Step5: Once a task is done allow group members to distribute expenses evenly(here Expense for lunch has been evenly distributed between user id 1 & 2.)

Step5: Once a task is done allow group members to distribute expenses evenly(here expense for Lunch worth 10.5 is evenly distributed between id 1 & 2.

Step6: Allow users to see the statistics for their past expenses(here the statistics of past expenses of both users has been shown)

Step6: Finally the statistics for their past expenses has been shown.
